

Displaying PLC Tags on Kepware Server

1. We will first create tags in the plc program.

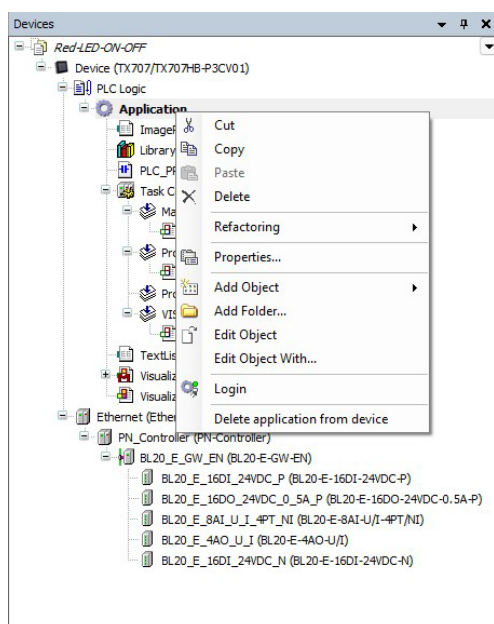

Creation of PLC Tags

1. Open **Codesys** and open the PLC program you wish to create tags.

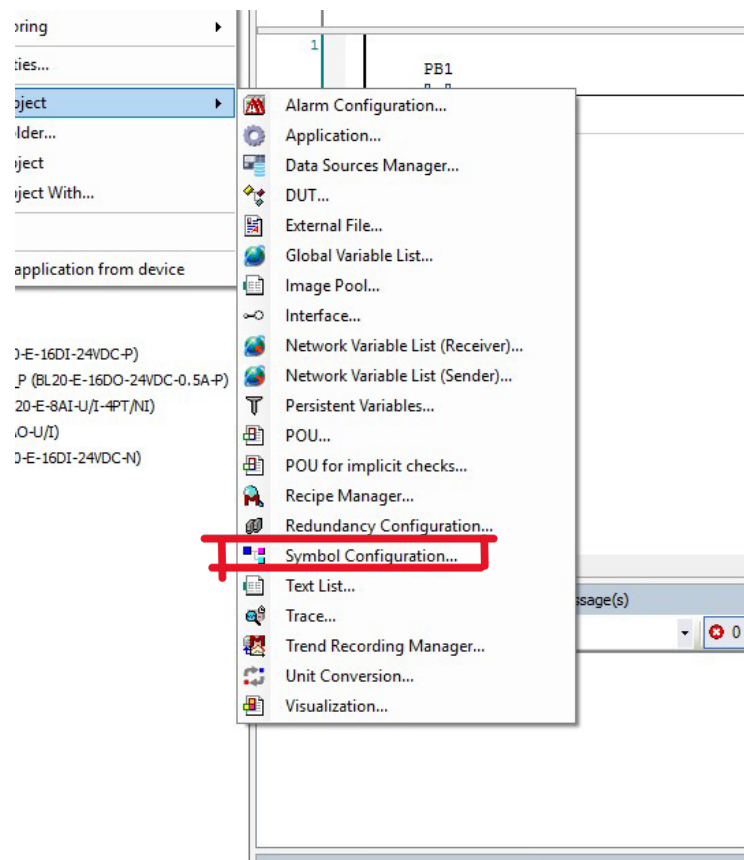

2. Make sure that it is **connected to the physical PLC**. Note down the **IP address** as it will be useful for establishing connection.

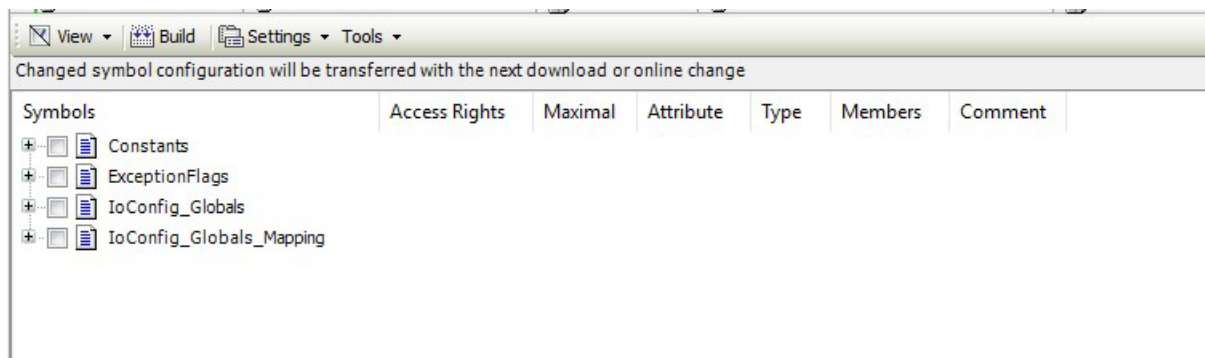

3. Right click on “**application**” and select “**Add Object**”.

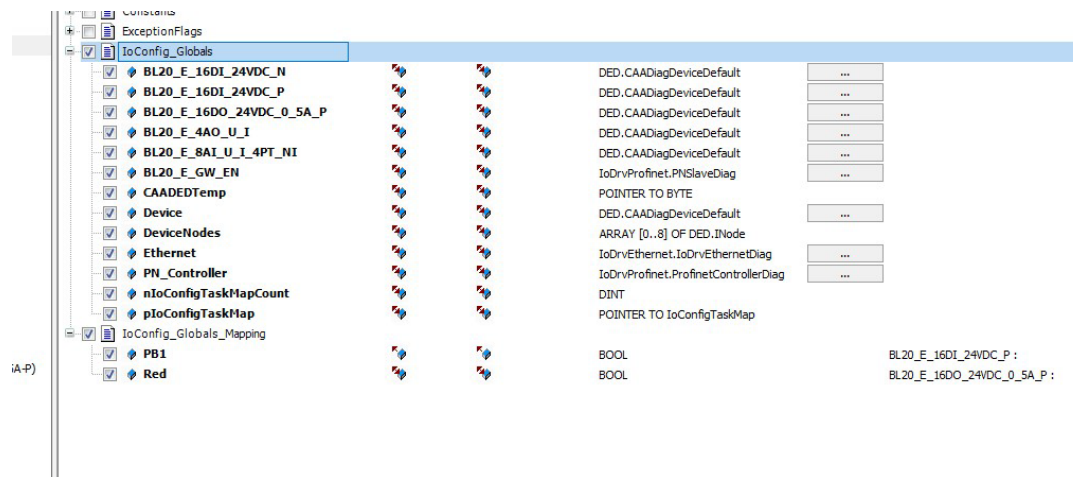

4. Choose **Symbol Configuration** and then add.

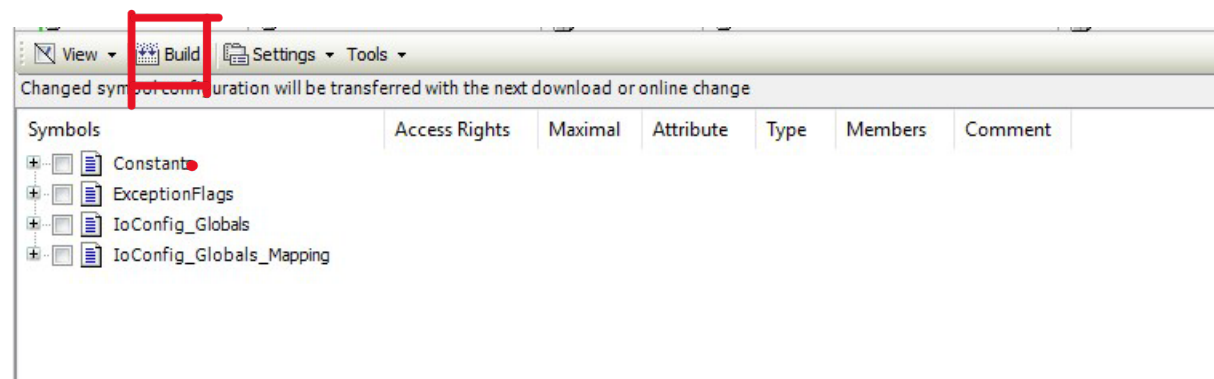

5. You would see a **list of tags** which are being used in the PLC program.

6. Tick the required tags you need to be shown on thingworx.

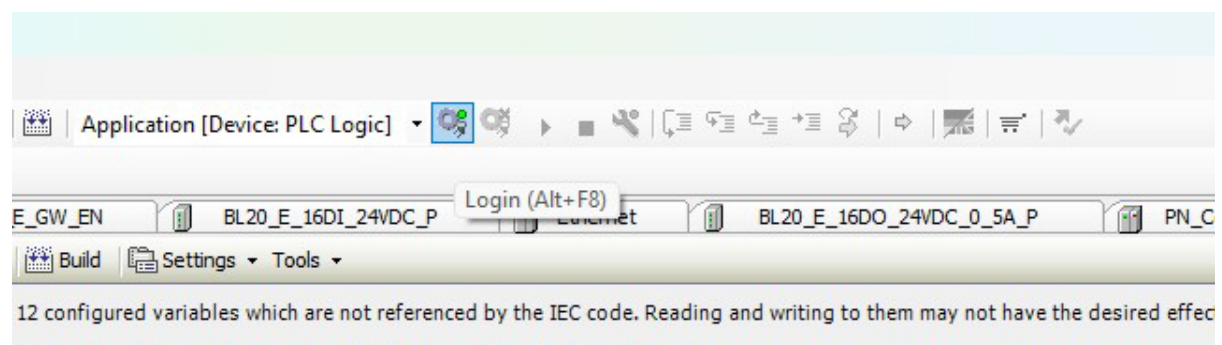

7. Click "build".

8. The required tags will be usually in "IO_config_global_mapping".

9. Once the program is built, click "Login" and "Start".

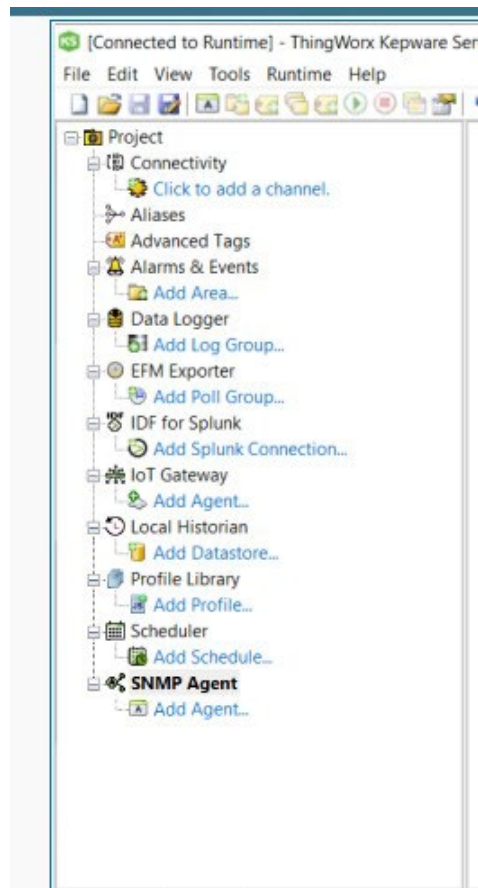

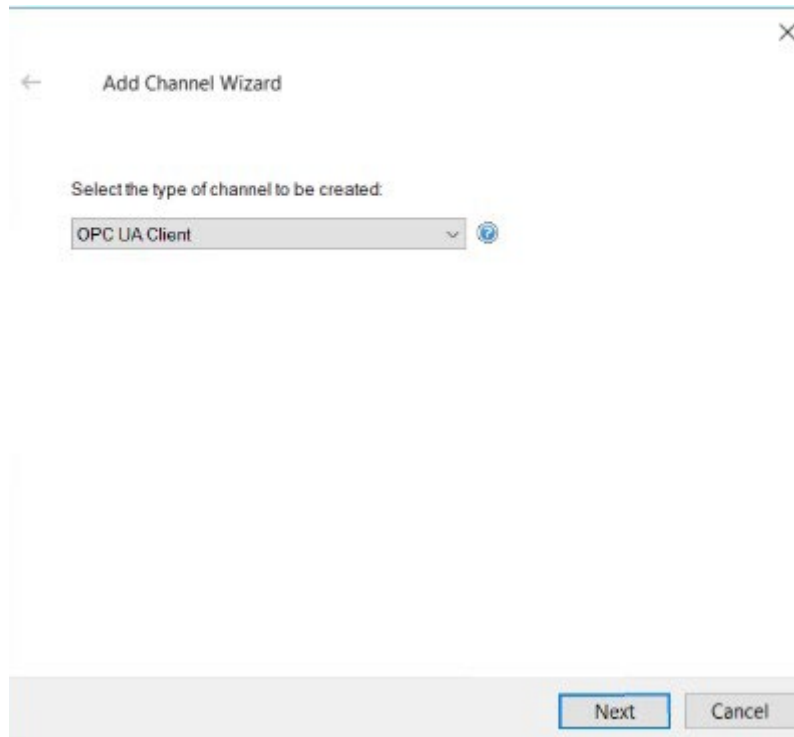

10. Make sure that PLC is actively connected to Codesys while doing all the tasks.

Configuring Kepware Server

1. Follow the document "Connecting_Turck_PLC_to_Kepware_Server" to connect to the remote server PC.
2. Open "ThingWorx Kepware Server 6 Configuration".
3. File -> New. (This will create new project).

4. Click on “Click to add a channel” under connectivity.
5. Select “**OPC UA client**” from drop down. Click next.

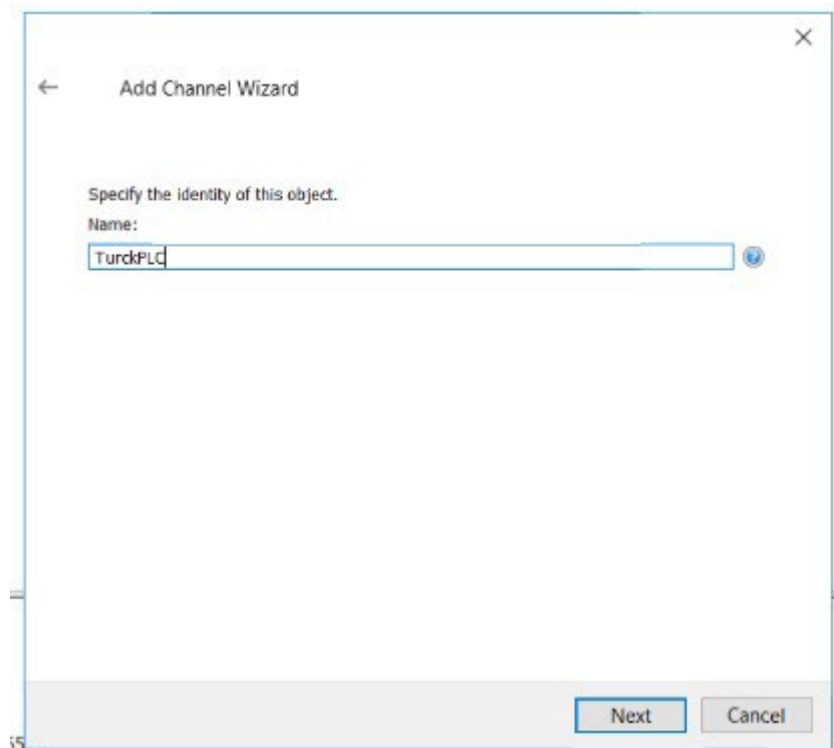

← Add Channel Wizard

Select the type of channel to be created:

OPC UA Client

Next Cancel

6. Name the channel. In our case, “**Turck PLC**”. Click next.

← Add Channel Wizard

Specify the identity of this object.

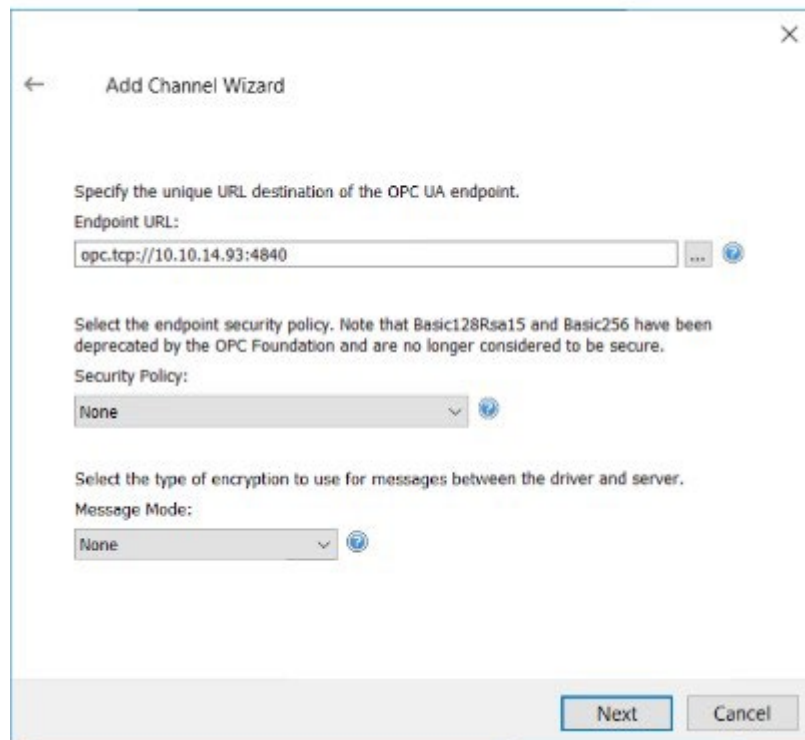

Name:

TurckPLC

Next Cancel

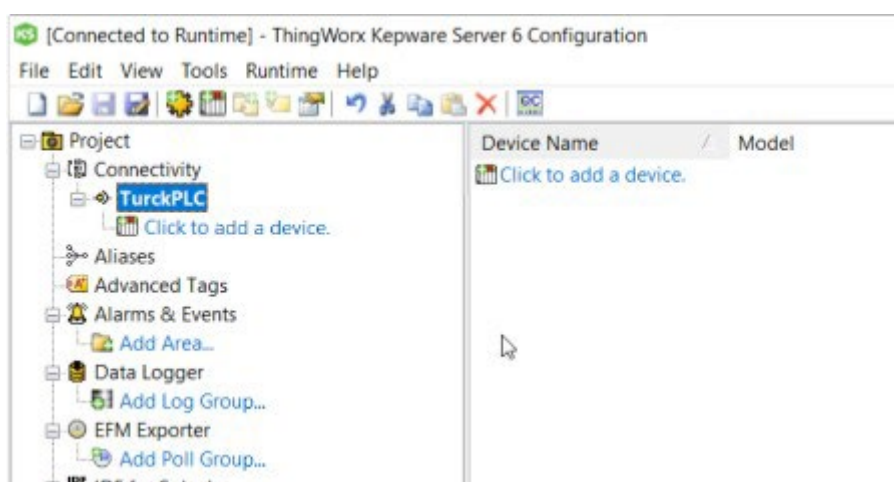

7. Click “Next”.

8. Replace “opc.tcp://localhost:49320” with “**opc.tcp://10.10.14.93:4840**”. Select Security Policy – **None** (Drop down menu). Note: 10.10.14.93 is ip address of our PLC which we have set as per “Smart Manufacturing Kit – Installation.docx”.

9. Click “Next”, “Next”, “Next” and “Finish”.

10. Click to “**Click add a device**” under “Turck PLC”.

11. Give name "TX707" which is PLC model number.
12. Click "Next" until you get "Select Import Item" window.
13. Expand DeviceSet -> Turck/ARM/WinCE TV -> Resources -> Application -> GlobalVars -> IoConfig_Global_Mapping. You can see now the tags created in CODESYS. E.g. PB1, Red.
14. Select both tags and click on "Add Items".
15. Click "Ok".
16. Click "Next" and click "Finish"
17. Expand **DeviceSet -> Turck/ARM/WinCE TV -> Resources -> Application -> GlobalVars -> IoConfig_Global_Mapping** under project tree and click on "IoConfig_Global_Mapping" or click on "Quick Client" button, TurckPLC.TX707.Deviceset. You can see real time values of tags created. 6
